Software Project Management

Assignment # 04

Last date of Submission: 23th May 2026
(Must be submitted on Google Classroom)

Submitted To: Mrs. Saira Shaheen

Student Name: Muhammad Haider Ali

Reg. Number: 2280354

SOFTWARE ENGINEERING DEPARTMENT

Instructions: Submit Softcopy in Google Classroom. Copied or shown assignments will be marked zero. Late submissions are not entertained in any case. This is not a group Assignment. Assignments should be submitted on due date and time. Typed in PDF format Proper headings required. Must be handwritten.

CL0-4

Assignment Details:

Q1.A project has the following activities.

Activity	Successor Activity	Duration (Days)
A	B,C	2
B	D,E,H	2
C	H	3
D	F	6
E	G	6
F	I	2
G	I	4
H	I	6
I	Finish	6

Draw the Precedence Network Diagram. Label each activity with name and duration and find the Critical Path and highlight floats / slacks

Q2:

A software development team consisting of two developers, **Ali and Ayesha**, is working on a mobile banking application for a client. The project is managed using a version control system.

Ali creates a separate branch for the **Payment Module** using a lightweight copy. He modifies payment_logic.java, while Ayesha simultaneously works on user_profile.java in the main branch without any locking mechanism. During development, Ali also adds a new file named transaction_history.java.

After completing their work over a few days, both developers commit their changes together as a single atomic update, moving the repository state from revision **v10 to v11**. Later, they merge the payment module branch back into the main branch and create a labeled snapshot named **release_candidate_v1** using another lightweight copy.

- Identify the most suitable **Software Configuration Management (SCM) model** used in this scenario. Provide at least **four strong reasons** to support your answer.
- Draw a **class diagram** of the selected configuration model showing its key components and relationships.
